INSTRUCTIONS FOR THE PRE-SURGICAL PERIOD

When performing stomatological surgical interventions

Dear patients,

You will be a subject to a surgical intervention. For smoothing the process of the surgery and the post-surgical period, comply with the following instructions:

- Before the day of the surgical treatment it is important to have a healthy sleep.
- On the day of the surgery it is important for you not to be hungry. Eat as usual. Do not drink alcohol.
- Brush your teeth well.
- For the ladies – do not put on make up, for the gentlemen – shave. Wear comfortable clothes.
- Take your usual medicine, if they do not contradict the instructions. Do not take Aspirin or Acetysal 3 days prior to the intervention. If you have a medicamental treatment, prescribed by the therapist – follow it.
- After the intervention you will receive instructions for the post-surgical period and a prescription for the medicine, that you will have to take.
- Be aware that the surgical intervention will not intervene with your usual obligations.
